

FIN WISE

GROUP 14

intro

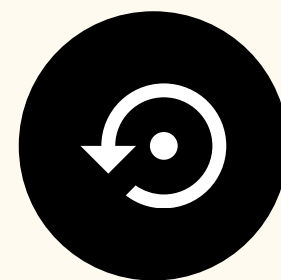

Introduce FinWise, a comprehensive budget planning application engineered for modern financial management. This powerful tool empowers users to track expenses, set realistic savings targets, and visualize their financial health in real-time. FinWise turns complex financial data into clear, actionable steps for everyone.

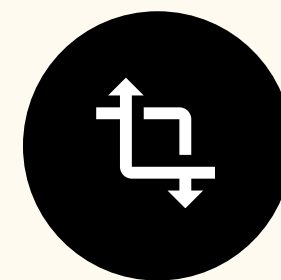

Feature

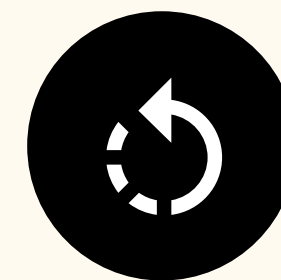

FinWise makes budgeting effortless by removing the friction from daily expense tracking. With simple voice, photo, and AI-powered tools, you can manage your money in seconds without the manual hassle. We turn your spending habits into clear, smart strategies for a better financial future.

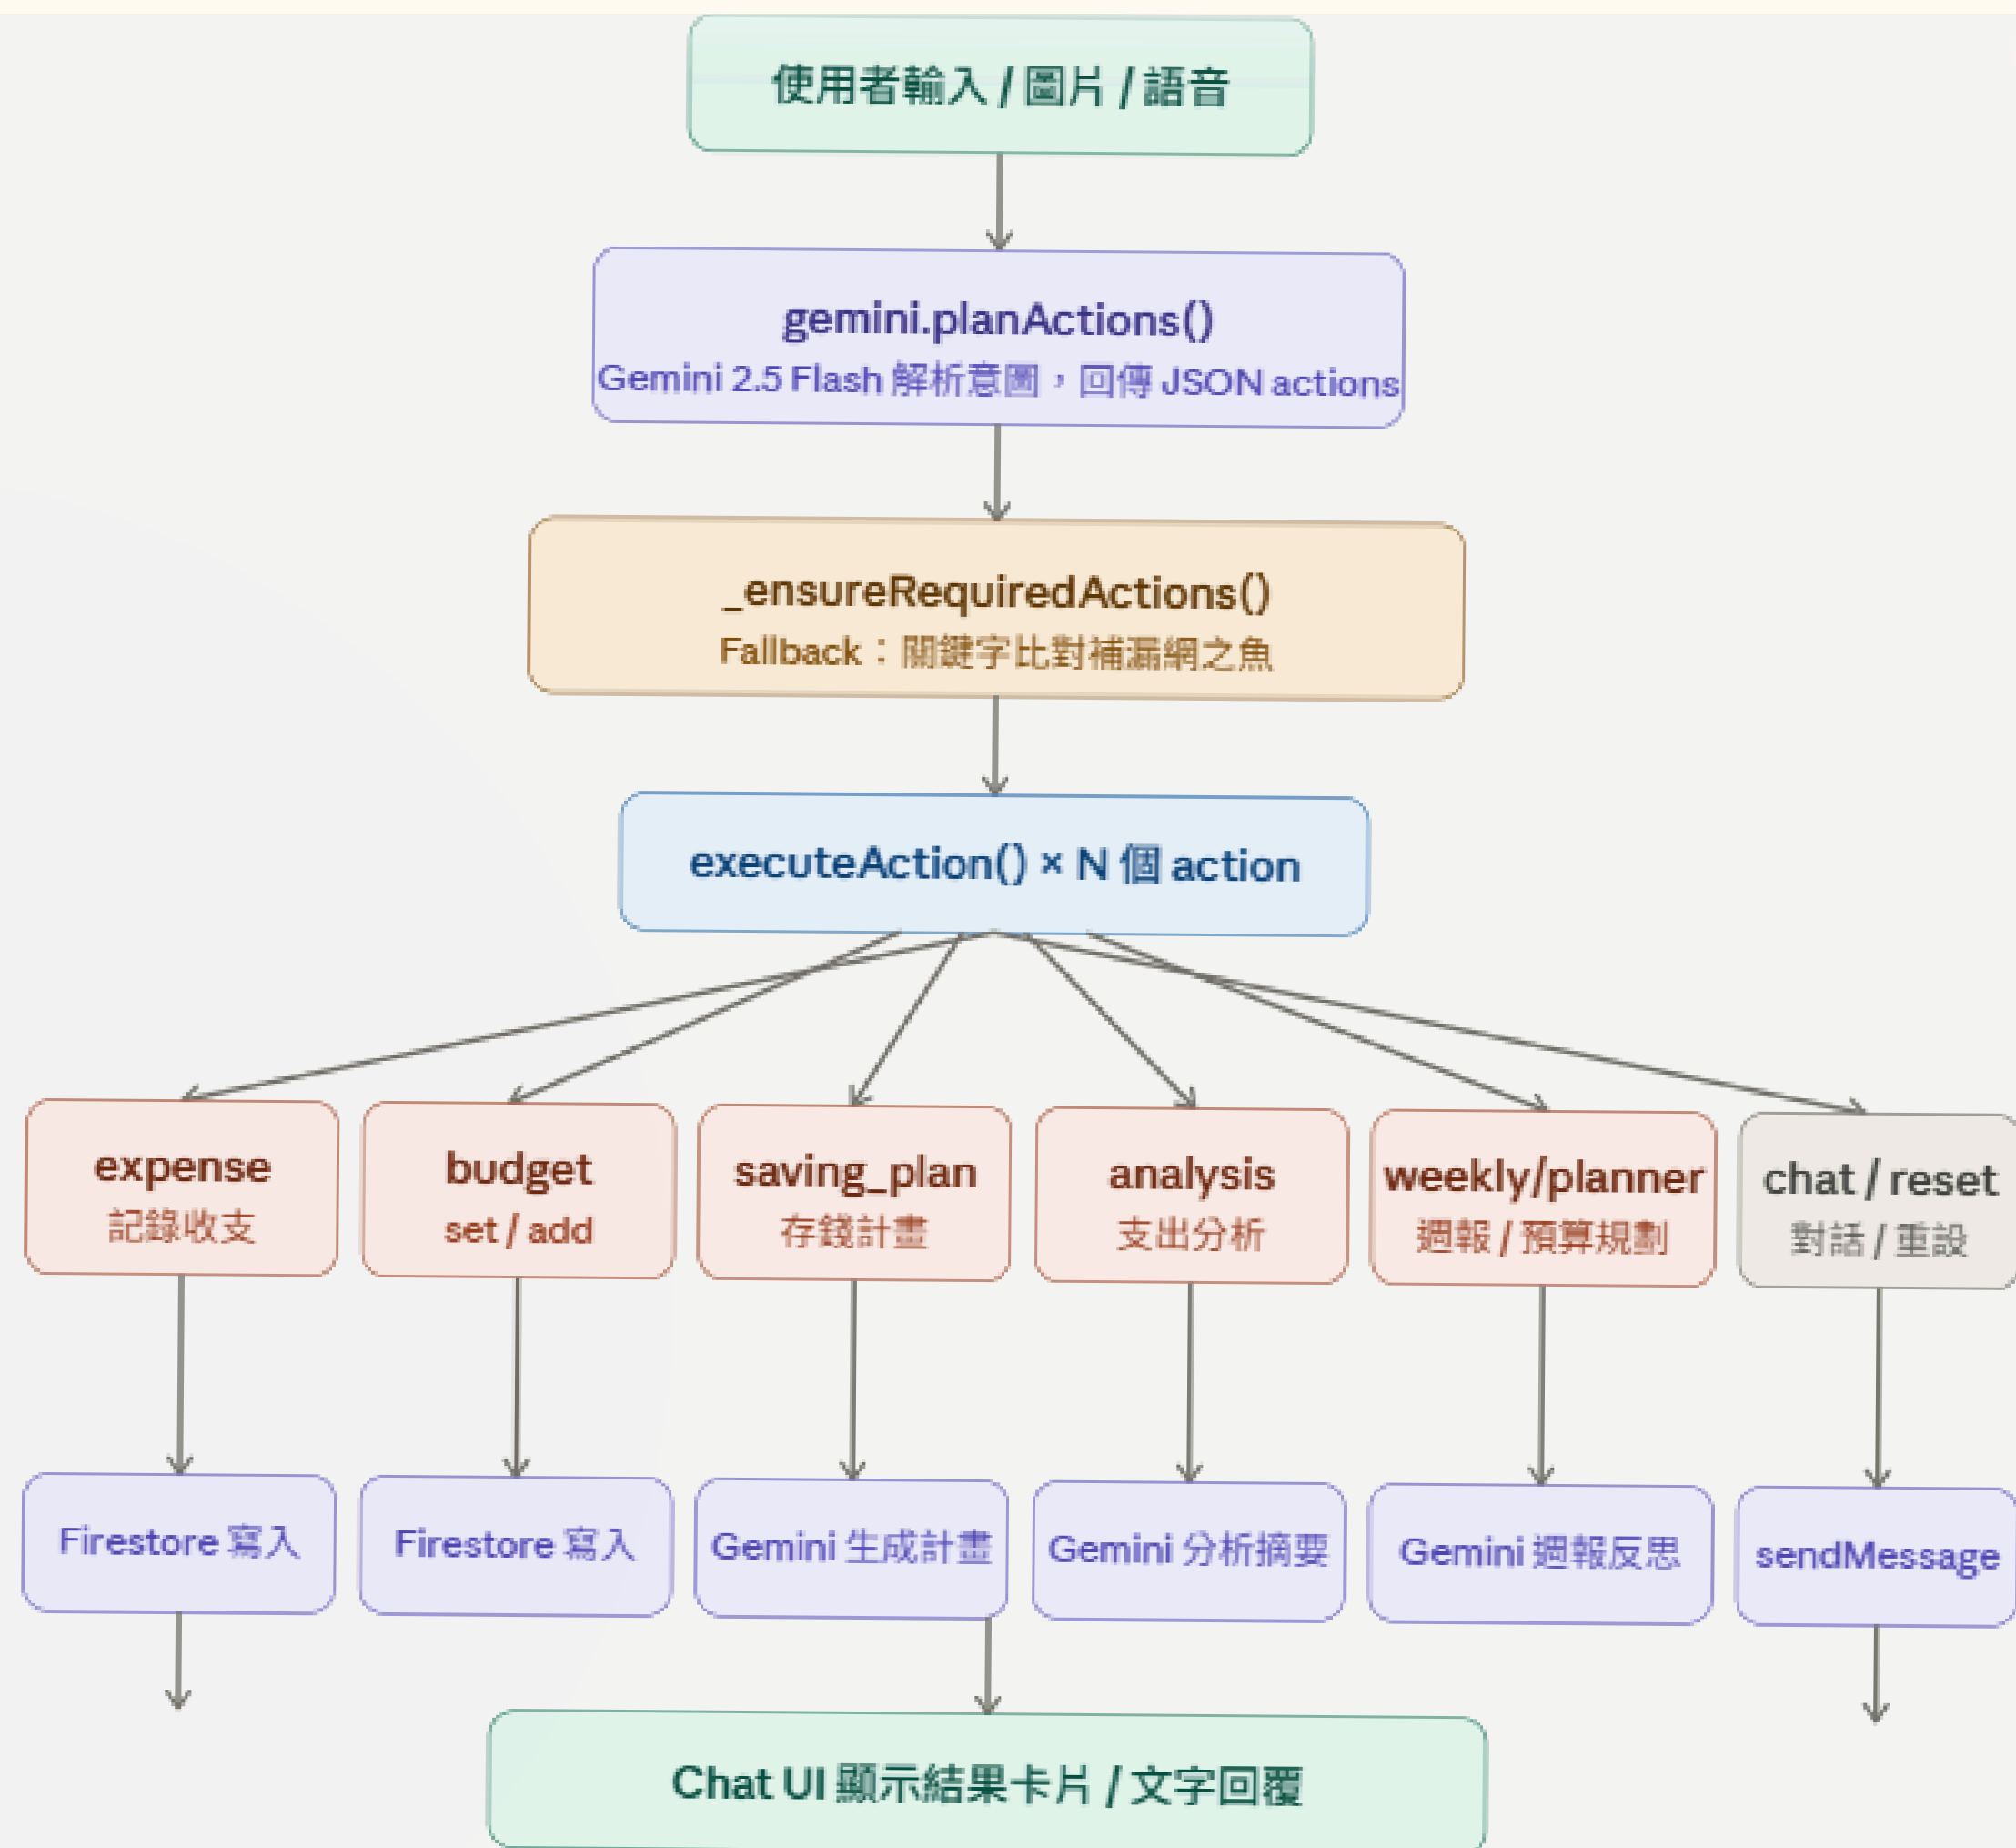

**Adaptive
Input**

Service 2

Service 3

The 'Hard' part

AI Transaction Parsing

- Convert natural language into transaction objects.
- Support Gemini parsing and offline fallback.
- Handle date extraction correctly.
- Ensure both creation paths save the same data.

Two different parsing flows can create inconsistent transaction records.

State Synchronization Between Screens

- AI chat page
- Expense list
- Dashboard
- Statistics

One transaction change must update every page immediately without conflicts.

Firebase Integration

- **Authentication**
- **Firestore CRUD**
- **User data synchronisation**

Must coordinate local data, cloud data, and asynchronous operations.

Thank You
